

AI ASSISTANT CODING

ASSIGNMENT-14

Name: B. Akhira Nandhini

Hallticket:2303A51516

Batch:22

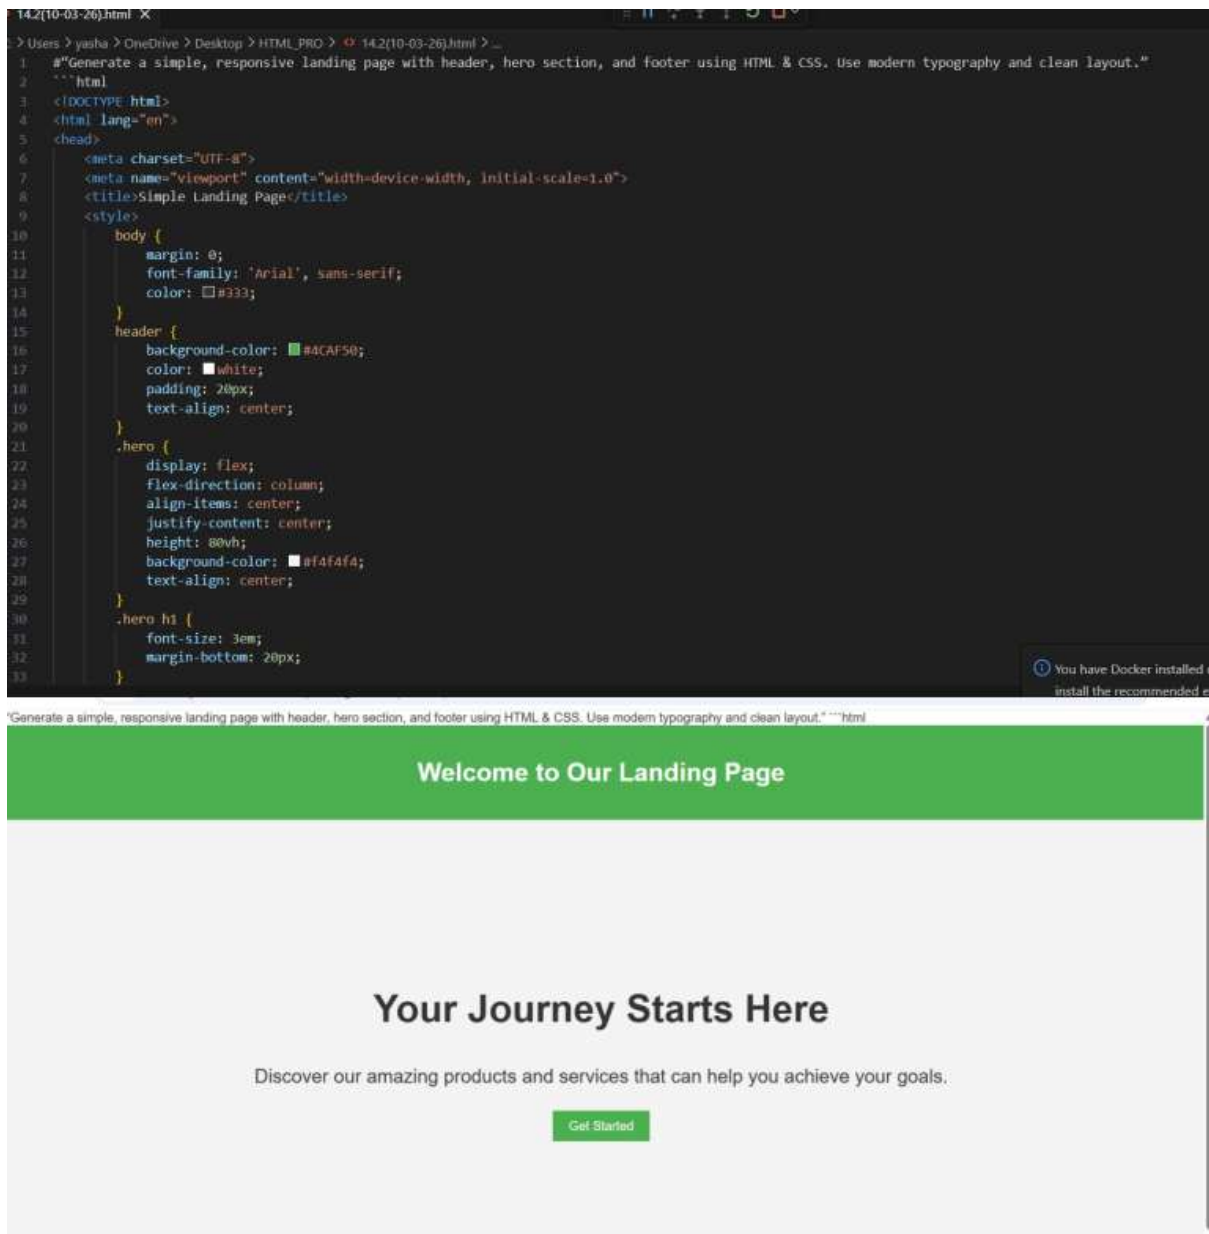

Task Description 1 – (Landing Page Design)

- Create a simple landing page for a product or service. Include a header, hero section, and footer.

Requirements:

- Use HTML and CSS to structure the page.
- Use AI to suggest layout alignment and typography.
- Ensure the page is responsive across devices.

Prompt: Create a simple landing page for a product or service. Include a header, hero section, and footer

Task Description 2 – (Theme Toggle Feature)

- Provide a button to switch between light and dark themes..

Requirements:

- Use JavaScript to toggle CSS classes.
- Use AI assistance to manage color contrast and accessibility.
- Ensure theme preference applies instantly on click.

Prompt: Add a JavaScript button that toggles between light and dark theme by switching CSS classes.

Prompt: Create a feedback form with validation and dynamic success/error messages using JavaScript.

```
#Create a user feedback form with JavaScript validation. Fields: Username, Rating, Comments. Show success/error dynamically.
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="UTF-8">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
  <title>User Feedback Form</title>
  <style>
    body {
      font-family: Arial, sans-serif;
      margin: 20px;
    }
    .form-group {
      margin-bottom: 15px;
    }
    .error {
      color: red;
    }
    .success {
      color: green;
    }
  </style>
</head>
<body>

  <div>User Feedback Form</div>
  <form id="feedbackform">
    <div class="form-group">
      <label for="username">Username:</label>
      <input type="text" id="username" name="username">
    </div>
    <div class="form-group">
```

#"Create a user feedback form with JavaScript validation. Fields: Username, Rating, Comments. Show success/error dynamically."

User Feedback Form

Username:

Rating (1-5):

Comments:

Task Description - 4 (Image Gallery with JavaScript)

- Task: Display a small image gallery on a web page.

Requirements:

- Use JavaScript to dynamically load images.
- Add next/previous navigation buttons.
- Use AI to optimize layout responsiveness.

Prompt: Develop an image gallery that switches images using next and previous buttons.

```
File Edit Selection View Go Run Terminal Help
C:\Users\yasha> python3 > Desktop HTML_PBO_2 14.216-03.262626
#Create an image gallery that switches images using next and previous buttons.
import tkinter as tk
from PIL import Image, ImageTk

class ImageGallery:
    def __init__(self, root, image_paths):
        self.root = root
        self.image_paths = image_paths
        self.current_index = 0

        self.image_label = tk.Label(root)
        self.image_label.pack()

        self.prev_button = tk.Button(root, text="Previous", command=self.show_previous_image)
        self.prev_button.pack(side=tk.LEFT)

        self.next_button = tk.Button(root, text="Next", command=self.show_next_image)
        self.next_button.pack(side=tk.RIGHT)

        self.show_image()

    def show_image(self):
        image_path = self.image_paths[self.current_index]
        image = Image.open(image_path)
        photo = ImageTk.PhotoImage(image)
        self.image_label.config(image=photo)
        self.image_label.image = photo

    def show_previous_image(self):
        if self.current_index > 0:
            self.current_index -= 1
            self.show_image()

    def show_next_image(self):
        if self.current_index < len(self.image_paths) - 1:
            self.current_index += 1
            self.show_image()

if __name__ == '__main__':
    root = tk.Tk()
    image_paths = [
        "C:\\Users\\yasha\\OneDrive\\Desktop\\HTML_PBO_2\\14.216-03.262626\\img1.jpg",
        "C:\\Users\\yasha\\OneDrive\\Desktop\\HTML_PBO_2\\14.216-03.262626\\img2.jpg",
        "C:\\Users\\yasha\\OneDrive\\Desktop\\HTML_PBO_2\\14.216-03.262626\\img3.jpg"
    ]
    gallery = ImageGallery(root, image_paths)
    root.mainloop()
```

Description - 5: (Notification Banner)

- Display a notification banner at the top of the page.

Requirements:

- Use JavaScript to show and hide the banner.
- Style the banner using CSS.
- Use AI to ensure smooth transitions and clean UI behavior.

Prompt: Create a notification banner with show/hide functionality and smooth animation.

```
#Create a top notification banner with show/hide using JavaScript. Use smooth transitions and clean UI.
<doctype html>
<html lang="en">
<head>
  <meta charset="UTF-8">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
  <title>Top Notification Banner</title>
</head>
<style>
  body {
    margin: 0;
    font-family: arial, sans-serif;
  }
  .notification-banner {
    position: fixed;
    top: 0;
    left: 0;
    width: 100%;
    background-color: #4CAF50;
    color: white;
    text-align: center;
    padding: 15px 0;
    box-shadow: 0 3px 5px rgba(0,0,0,0.1);
    transform: translateY(-100%);
    transition: transform 0.5s ease-in-out;
  }
  .notification-banner.show {
    transform: translateY(0);
  }
  .close-btn {
    position: absolute;
    right: 20px;
    top: 15px;
    background-color: transparent;

```
